| Hydro tower                                               |                  |
| Utility pole, light standard                              |                  |
| Pipeline                                                  |                  |
| Pit, pile                                                 |                  |
| Quarry, cliff                                             |                  |
| Stream: definite                                          |                  |
| indefinite                                                |                  |
| Ditch                                                     |                  |
| Shoreline, flooded area                                   |                  |
| Dam, falls, rapids                                        |                  |
| Swamp                                                     |                  |
| Contour: index, intermediate, indefinite                  |                  |
| depression                                                |                  |
| Wooded area                                               |                  |
| Scrub                                                     |                  |
| Hedge                                                     |                  |
| Individual tree, shrub                                    |                  |
| Dyke, embankment, cutting                                 |                  |

**GENERAL INFORMATION**

Vertical information, expressed in metres, is based on Mean Sea Level datum established by Geodetic Survey of Canada.

Coordinate values, expressed in metres, are based on the Universal Transverse Mercator (U.T.M.) Grid system.

Map compilation from vertical aerial photography flown on 03 May 1984 by North West Survey Corporation Ltd., Edmonton, Alberta.

Roll N° A 26460

Scale: 1/6,000 (approx.)

Photo N°s 3 to 19 (odd) &amp; 26 to 42 (even)
